

Name: \_\_\_\_\_

**Homework – Monday (January 21, 2019)**

Solve the following problems **without a calculator**. You **MUST** show your work. **NO WORK = NO CREDIT**.

1. Solve the system by graphing.

$$y = -x - 2$$

$$y = 3x + 1$$

2. What is the solution to the system?

3. Is the point (2, 0) a solution to the system of equations?

$$y = -3x + 6$$

$$y = 2x - 4$$

4. What is the value of  $k$  if there are infinite solutions? Explain.

$$y = 5/4x + 8$$

$$y = kx + 8$$

**Homework- Tuesday (January 22, 2019)**

Solve the following problems **without a calculator**. You **MUST** show your work. **NO WORK = NO CREDIT**.

1. How many solutions in the system?

2. What is the value of  $k$  if there are infinite solutions? Explain.

$$y = -1/2 x + 2$$

$$y = -1/2 x + k$$

3. What is the solution to the system?

$$y = -1/2x - 1$$

$$y = 1/4 - 4$$

4. Given the equation  $y = 1/2x - 3$ , which expression below would create a system with no solutions? Explain.

a.  $y = 1/2x - 3$

b.  $y = 1/2x - 3$

c.  $y = -1/2x + 3$

d.  $y = 1/2x - 3$

### Homework - Wednesday (January 23, 2019)

Solve the following problems **without a calculator**. You **MUST** show your work. **NO WORK = NO CREDIT**.

1. Solve this system by graphing.

$$y = 2x$$

$$y = x + 1$$

2. What is the value of  $y$  in the solution to the system?

$$y = x - 7$$

$$y = -1/2x + 5$$

3. What value for  $x$  and  $y$  would satisfy both of these equations?

$$y = x + 7$$

$$y = 1/3x + 3$$

4. Is the point  $(2, 5)$  a solution to the system of equations?

$$y = -x + 7$$

$$y = 2x + 1$$

### Homework - Thursday (January 24, 2019)

Solve the following problems **without a calculator**. You **MUST** show your work. **NO WORK = NO CREDIT**.

1. What is the solution to the system?

2. Solve the system by graphing.

$$y = x + 5$$

$$x + y = 1$$

3. What is the value of  $k$  if there are no solutions? Explain.

$$y = -2x + 5$$

$$y = kx + -2$$

4. Is the point  $(-2, 1)$  a solution to the system of equations?

$$3x - y = 7$$

$$2x + 3y = 1$$
